

SIOB 296 - Introduction to Programming with R

Eric Archer

SIOB 296: “Introduction to Programming with R”

Section: 902537 Dates: April 4, 2017 - June 6, 2017 Time: Tuesday 2:00 - 5:00pm Location: Eckart Building, first floor, Sea Cave Four Units, S/U Grading Only

Contact: Eric Archer eric.archer@noaa.gov 858-546-7121

Course Description

This course will focus on establishing a solid fundamental understanding of data manipulation and analysis with R. No programming experience is necessary, and all backgrounds are welcome. We will start with an introduction to the R command line, followed by a detailed description of R data structures and how to manipulate them. The course will continue by covering commonly used R functions and students will then learn how to write their own functions and scripts. We will end by exploring visualization in R using base R graphics and the `ggplot2` package. For the final project, students will write an R script to analyse their own data as well as edit R scripts from other students.

Software

Students should come with the latest versions of R and RStudio loaded on their laptops. They can be obtained at:

R: <https://www.r-project.org> RStudio: <https://www.rstudio.com>

Syllabus

Week 1 (4/4) R console, RStudio, data structures, vectors, indexing, logical operations Week 2 (4/11) factors, matrices and arrays, indexing review Week 3 (4/18) lists, data frames, reading and writing data Week 4 (4/25) common functions for data summary and selection Week 5 (5/2) character and string manipulation Week 6 (5/9) function writing and flow control Week 7 (5/16) **apply** family of functions Week 8 (5/23) graphics: **base** and **ggplot2** Week 9 (5/30) statistics and model fitting Week 10 (6/6) date and time handling, **tidyr** and **dplyr**, other special functions
